

financialmarketsimulator.receipts.Receipt

```
classDiagram
    class Receipt["financialmarketsimulator.receipts.Receipt"]
    class BidReceipt["financialmarketsimulator.receipts.BidReceipt"]
    class TradeReceipt["financialmarketsimulator.receipts.TradeReceipt"]
    Receipt <|-- BidReceipt
    Receipt <|-- TradeReceipt
```

The diagram illustrates a class hierarchy. At the top is the 'financialmarketsimulator.receipts.Receipt' class. Below it are two subclasses: 'financialmarketsimulator.receipts.BidReceipt' on the left and 'financialmarketsimulator.receipts.TradeReceipt' on the right. A horizontal line connects the two subclasses, with a vertical line extending upwards from its center to an arrowhead pointing at the 'Receipt' class, indicating that both subclasses inherit from the base class.
